6. Discussion of Rate Adjustment in Response to Continued Drought. The General Manager recommended that rates should not increase at this time for several reasons: 1) the financial projections were revised to reflect a demand hardening and increased revenue during the winter months; 2) if the drought worsens, the San Francisco Public Utility Commission (SFPUC) could institute a mandatory 20% reduction with penalty charges and an increase in rates would most likely be required at that time; 3) due to the low usage, SFPUC will need to recoup revenue for fiscal year 2015-16 that may spike next year’s rate; 4) if the drought subsides, then increased revenue would be expected next summer; and 5) an increase in rates in response to the District’s low revenues will appear to customers to be an unfair response to their efforts to conserve.
